

Do you still manage projects and resources like this?

Ask yourself:

How much effort do you spend to keep such a process alive?

How much time, energy and resources fight against tools that simply weren't designed for that?

How many critical business decisions rely on Excel and PowerPoint reports?

Do you trust your data at management level?

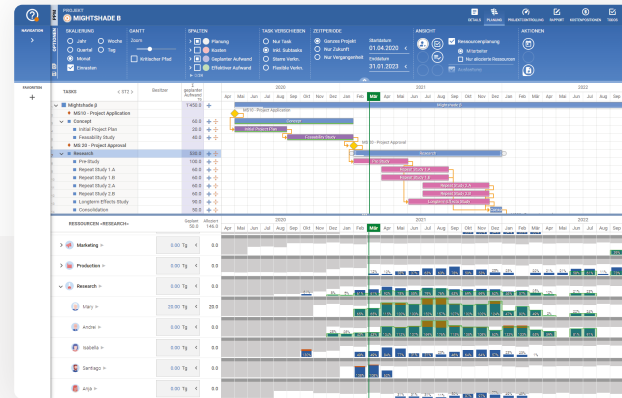

How much risk are you prepared to take when it comes to business-critical decisions?

You can do much better!

Meet PQFORCE

Planning Intelligence for Enterprises of Today

PQFORCE is a unique web-based multi-user solution that ensures cost optimization in multi-project and resources management. PQFORCE connects all business units of an enterprise and its world-wide locations as well as all project stakeholders, including customers and suppliers, in a never-seen-before way. PQFORCE substantially increases the productivity and efficiency in the enterprise due to its real-time architecture with artificial intelligence and a best-practice planning approach.

Enterprise-wide holistic planning

Not only does it cover all the planning levels from strategic portfolio management down to project planning and execution, it also seamlessly links project-oriented planning with skill-based resources management.

Real-time web architecture

top-notch architecture based on latest web standards and technologies for uncomparable performances

100% Swiss-made

delivered from highly-secure ISO27000-certified Swiss datacenters

Tiny footprint - no installation

All you need to use PQFORCE is a modern web browser plus an Internet connection. On premises installation is available

SaaS or on-premise

primarily a Software-as-a-Service (SaaS), can also be acquired and installed as an on-premises solution

Resources-based pricing

Subscriptions are charged per managed resource and project. Any entity that can be planned counts as a resource (employee, organisational unit, skill etc.)

Optional SLAs (support and security)

Included in the standard subscription comes a support and backup SLA. Optionally, you can go for higher-order SLA to increase hotline availability, increase support time quotas, shorten reaction times, shorten backup intervals, enlarge the number of backup copies etc.

Unlimited users

PQFORCE is introduced and rolled out in the enterprise in an iterative manner

1 Pick a small solution package

2 Start running pilot setup with a dozens of users

3 Choose your own rollout pace, be it weeks or months

Small investment

A highly customizable commercial off-the-shelf product that due to its SaaS nature allows substantial saves on investment budgets

Pay as you go

Gain planning security and reliability by distributing the spendings over time: no need for a big investment

Check your own business case

A business case analysis shows that in a typical scenario an organisation with a size of about 300 resources achieves a return on investment after less than a year. Ask us for checklists and templates, and easily calculate your own business case!

About us

INTRASOFT is an independent Swiss software-solution provider. PQFORCE was developed from scratch within only 3 years by INTRASOFT in collaboration with various Swiss multinationals. This ensures the implementation of best practice in project and resources management. For more information contact us at:
