

PROJECT COLLABORATION

**Improve
capital project
communication
and free up time for
what matters most**

As projects grow larger, more complex and need to be executed faster, the risks of overruns (schedule/cost) are increasing. Also, due to size and complexity more parties are involved and communication often becomes a bottleneck. This is troublesome in an industry where US\$1 billion projects are now becoming the norm and multi-billion-dollar projects involving many different contractors working globally in multiple locations are more frequent.

To address these challenges, Hexagon PPM introduces the Project Collaboration solution. HxGN SDx® Projects in combination with EcoSys can help make sure all parties are aligned and informed. With the right information, at the right time, the right design decisions can be made in time. You are notified about actions through an automated workflow that track progress against your schedule and budget.

The Project Collaboration solution will enable your organization to:

Increase Efficiency of Engineering Work Processes

- Enforced inter-discipline communication
- Set workflow with all parties internal and external
- Notification
- Role-based access to protect IP

- More efficient use of the resources (not chasing information)
- Faster turnaround of the data/documents
- Consolidation of all mark-ups
- 10% less hours due to more efficient work/communication

Succeed with Accountability and Visibility into Project Progress

- Role-based actions
- Sign off
- Defined and enforced workflow
- Manage against budget and schedule faster access to the right/relevant data/documents
- Discipline/task-based queries/relationship to see work packages and impacts

**MAKE AN
IMPACT**

**BREAKTHROUGH
BARRIERS**

**ENABLE YOUR
ENGINEERS**

Are you ready for your communication problems to be solved?
