

Streamline your resource forecasting and project delivery with Tempus Resource Scheduling. Flexibly enable Scheduling for users and groups where appropriate to fully execute on your project delivery process by moving from early stage resource forecasting to the execution phases where detailed scheduling may be necessary. Eliminate the need for desktop scheduling tools and consolidate your forecasting and strategic planning functions with your project delivery functions to digitally transform your organization's resource and project management.

Key Benefits

- Enable detailed project planning in your existing Tempus Resource environment.
- Centralize scheduling and eliminate desktop planning software.
- Enable or disable the Scheduling functionality through security.
- Empower project managers to build upon resource forecasts established by resource managers.
- Add flexibility to how your organization transitions from resource forecasting to project execution.

Key Features

- Create complete, multi-level, hierarchical project schedules.
- Utilize summary tasks, sub-tasks and milestone task.
- Leverage critical path features and related calculations.
- Create finish-to-start, start-to-start and finish-to-finish dependencies.
- Drag-and-drop tasks and dependencies to freely manipulate the schedule.
- Assign individual or groups of resources to tasks.
- Quickly update % complete.
- Import schedules from Microsoft Project.
- Secure who can view and/or edit project schedules by project or using project access policies.
